D. Silver. OK.

"D" Silver is adjusted
 "R.F.C" " shows a credit to sil. 9c
 of 19.16 7.03oz. Due to the melts being
 charged to the M.R. on the Fineness of
 9996 from R.F.C. + Credited @ 999 1/4
 9 melts @ 999 1/4

The net gain in calculating these 9 melts @ 999 1/4
 is 18.24 Fine oz. the difference between 19.16 or
 19.20 and 18.24 comes from the pick up in fine
 ounces from dropping the fractions on individual
 melts when charged and the gain when
 the gross ounces is allotted as a mass. Total
 gross ounces charged for a day's melting times
 the constant, therefore a total of 6 or 10 melts
 plus the copper without the fine ounces on the
 individual melts as charged to the division

 Per Bureau telegram

Low agreed to hold off — ordering Cu until later. He wanted to order 6 cars for June delivery but I told him the cars would not be needed until July 8 and the first week in July would be soon enough. Unless Mr. M. does not want to use the stacked Cu in the Cu Pit.

On June 7, as it stands now we will have 3 cars stacked in the Oil Room and 1 car stacked in the Cu Pit. Low wanted to order the six cars and said there would be plenty of men if we had to stack them but I pointed out the expense involved and asked him to hold off.
